

## Viticulturist/PCA Position Available

### Job Description

Highly regarded Napa Valley vineyard Management Company has an opportunity for an experienced viticulturist with a PCA license. In addition to vineyard status monitoring, duties include design and implementation of disease and pest control programs, fertility management, pesticide use compliance and reporting, and maintenance of vineyard data base. In addition, this person is responsible for pesticide safety training and recordkeeping. The successful candidate will have experience in the production of ultra-premium fruit, with a strong emphasis on quality.

English/Spanish a plus but not required. Must be proficient in Word and Excel, and experience with Sure Harvest and Tule Technologies is desired.

The client base covers approximately 650 acres, with the average vineyard size being around 20 acres.

Farming practices are designed to be sustainable and are a mixture of conventional, organic (some certified) and a small number of biodynamic vineyards. The management framework is based on a very high level of individual accountability, as opposed to rigid structure, and high levels of performance are highly rewarded. A full suite of benefits is provided
